Highly motivated cybersecurity enthusiast with a passion for ideating and implementing secure solutions. Security-focused internal auditor with 4 years of experience managing environments with stringent compliance requirements. Proven ability to research and recommend cost-saving solutions that improve cybersecurity readiness.

Professional Experience

Internal Auditor (IT Security) Housing Development Board	Apr 2024 – Present
- Conducted IT security audits on GCC (Government on Commercial Cloud) AWS-hosted and public-facing government systems, assessing controls against IM8 and HDB security requirements to identify access control gaps and unmitigated vulnerabilities across cloud and on-premise environments - Drove remediation closure of 36 findings from the outsourced audit of an AWS-hosted estate management system, tracking remediation progress and coordinating with external auditors to ensure timely resolution of control gaps - Led third-party vendor risk assessments covering the full ICT vendor lifecycle for a public-facing web portal, reviewing security policies and conducting control verification interviews to verify controls at each stage - Evaluated and tendered an LLM-enabled audit chatbot projected to generate 8.6% man-day savings, conducting pre-deployment testing and ensuring outputs met internal quality and safety standards prior to deployment	
Product Management Associate, Security Shopee Pte. Ltd.	May 2021 – Feb 2023
- Drove the development of circuit breaker and alert system to monitor external traffic, triggering on predefined metrics and allowing stakeholders to respond to suspicious activity in real-time - Assisted the routing of traffic to new security gateway via configuration of elastic load balancer and security group rules for > 20 business lines across multiple Shopee regions by working with client-side product managers and engineers - Led the development of front-end interfaces for traffic security products developed internally to allow analysts to configure traffic control strategies in real-time, resulting in time savings of > 2 weeks on average - Spearheaded projects to improve the capabilities of in-house traffic signature verification service, checking an average of 1.8 billion traffic requests daily against 5 predefined rules - Routinely engaged in-house pentest team to conduct security audits for in-house identity and access management (IAM) service, and organized the security patching workflow timeline for said service	

Personal Project

AWS Security Lab Project	
- Built and deployed a public-facing website on AWS using Terraform as Infrastructure as Code (IaC) - Secured the environment using AWS WAF with OWASP Top 10 protections, blocking common web attacks such as SQL injection, cross-site scripting and automated bot traffic - Configured WAF logging to capture incoming traffic and enabled analysis via SQL querying tools, providing visibility into attack patterns and potential threats	

Certifications

Certified Information Systems Security Professional (CISSP) ISC2	Jul 2026 (estimated)
Certified Information Systems Auditor (CISA) ISACA	Jan 2026 - Present
AWS Solutions Architect - Associate (SAA-C03) Amazon Web Services (AWS)	Jan 2024 - Present

Education

Bachelor of Science (Hons), Double Major in Statistics & Economics National University of Singapore	Aug 2017 – Apr 2021
Cumulative CAP: 4.42 / 5.00
